

Garland 1RU 19", Modular 24 Port Fibre Panel

**New & Improved
Now accommodates
48 Fibres**

The Garland 24 Port 19" rack mount FOBOT (Fibre Optic Breakout Terminal) provides an economical solution.

FOBOT Features

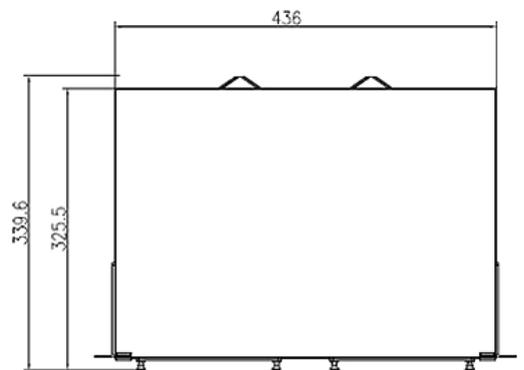

- 48 Fibre Capacity
- Includes 2 x 24f Splice Cassettes with Combs
- Includes Cable Glands, Internal Cable Management, Fibre Tubing & Splice Protectors,
- Includes Adapter Panels, with Screen Printed Numbers for SC/DLC, DSC/QLC, blanking plates and plugs
- Includes all Mounting Screws and Cage Nuts
- Adjustable Mounts

Garland's 24 port FOBOTs have been updated to allow for up to 48 fibres to be managed in a 1RU enclosure.

The new FOBOTs provide an economical solution for splicing and managing optical fibre cables and now feature heavier gauge steel. Each FOBOT comes with a full installation kit including splice trays (for up to 48 fibres), splice protectors, protective sleeving, mounting screws, and modular adapters for SC and LC connectors in both simplex and duplex configurations. The modular adapter panels feature improved heavier duty retaining clips making them more secure in the FOBOT front panel. The sliding FOBOT includes a heavier gauge ball bearing slide with a greater number of bearing surfaces for a smoother action.

Cable entry is via the rear of the FOBOT drawer. Cable glands and strain relief posts retain the fibre. The 2 x 24f splice trays and splice combs manage and hold the splice protectors. Fibre managers maintain the correct bend radius and allow a smooth transition to the rear of the through adapters.

Available in Fixed and Sliding variations.

Part Number	Description	Type	Colour
MT30903A	1RU 24/48 Fibre FOBOT Sliding	Sliding	Black
MT30904A	1RU 24/48 Fibre FOBOT Fixed	Fixed	Black
